Projects

kaChing!

Budget Tracker with Data Visualization

kaChing! is a budget tracker that lets users keep track of their income and expenses on a monthly and weekly basis. You can categorize your expenses and then compare them visually with charts and graphs.

Features:

- OAuth User Authentication
- REST API with CRUD operations
- Currency Converter using third-party API
- Password Reset functionality
- Compare expenses on a monthly and weekly basis by category with data visualization

Technologies:

React, Flux, Chart.js, Flask, PostgreSQL

Code: <https://github.com/andresborn/Proyecto-Final-4Geeks>

Live: <http://kachingcr.herokuapp.com/>

StarWars Blog

Use the Source, Luke

Built with React, the views are filled dynamically with data fetched from SWAPI.dev using react-router-dom

Features:

- Flux Architecture and Context API for data logic and distribution
- Routing to switch views
- Filterable Search Bar
- Save favorites to localStorage

Technologies:

React, Flux, Bootstrap, React-Router

Code: <https://github.com/andresborn/sw-blog>
